They are often constructed as modular devices, meaning multiple valves and contacts can be used in conjunction with one another to create many different system combinations. What are pneumatic manual control valves used for. Pneumatic manual control valves have a number of different applications within an air flow system. They can be used for directional control, meaning they allow air flow through a tube in one direction and not another, or for pressure relief, allowing the pressure to dissipate to somewhere outside of the system. They can also be used more broadly for flow control, adjusting the amount of air let through the system. <http://gomezcanan.com/userfiles/commander-bcm50-manual.xml>
